Sundial Solstice: How to Use

HR + Payroll quick-start guide

What it is

Sundial Solstice is one system for **schedules, timesheets, leave and payroll**. The idea: time goes in, payroll comes out, and nothing gets lost in between. It is also built so your month can close itself instead of being assembled by hand.

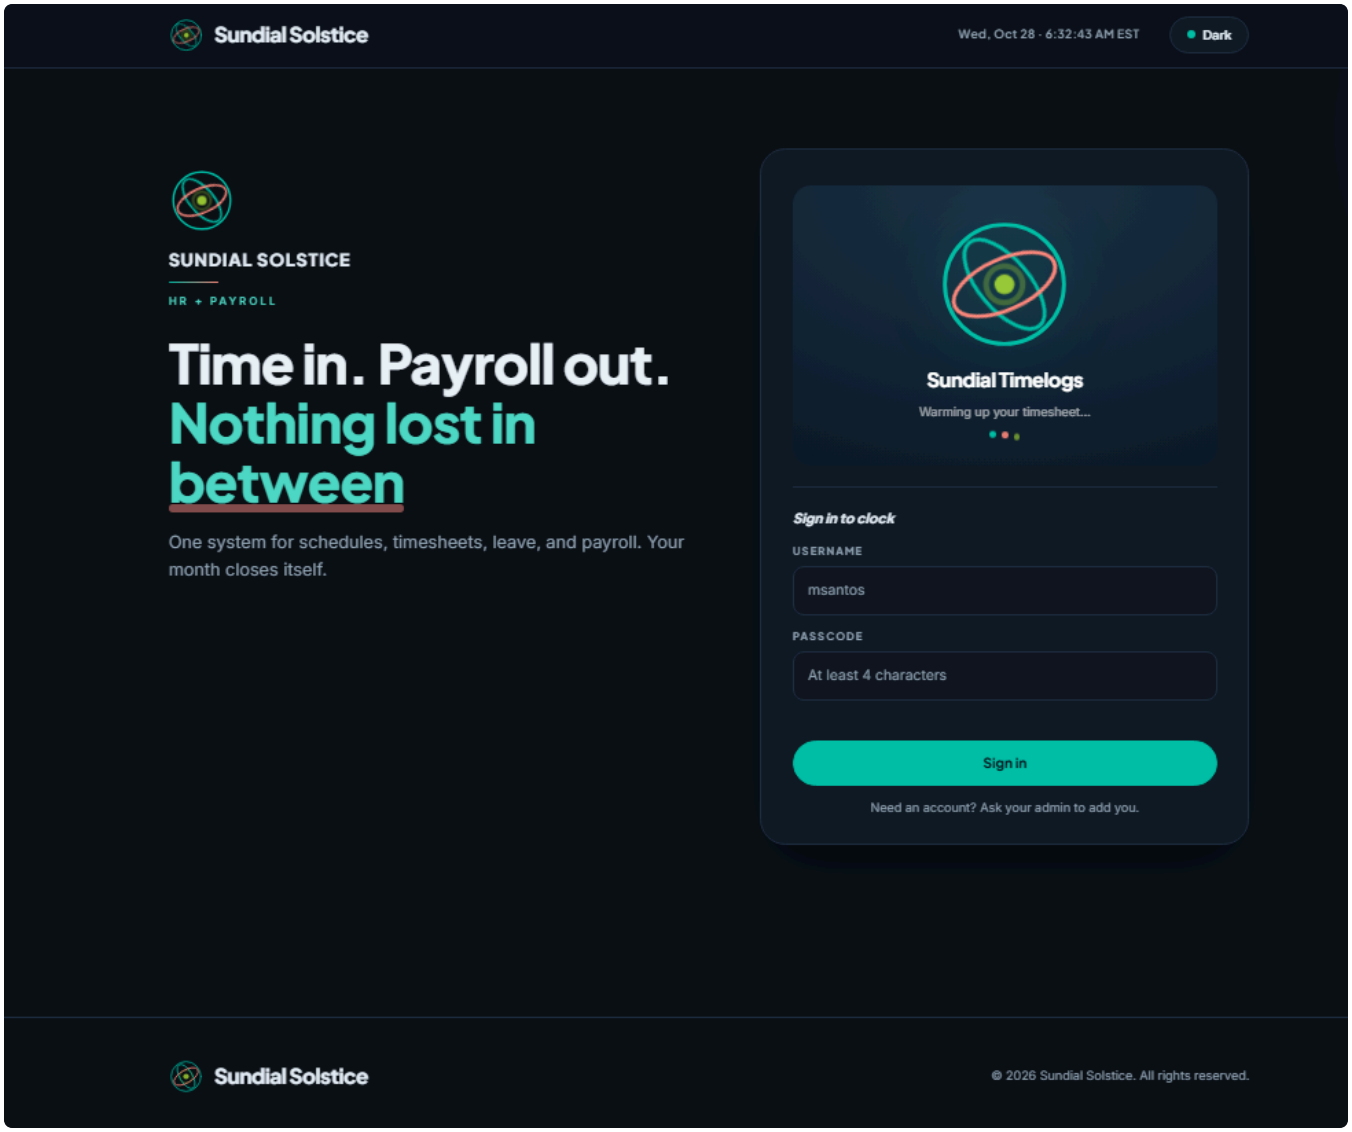

Getting started

Eight short steps. Each one has the instructions first and the matching screen right below, so you can follow along.

Step 1: Open the app and sign in

Go to https://sundialsolstice.netlify.app/. Type your **Username** and **Passcode**, then press **Sign in**. There is no sign-up on this page. If you don't have an account yet, ask your admin to add you.

You may see "Warming up your timesheet…" for a moment while it loads. To switch to dark mode, use the **Dark** button at the top.

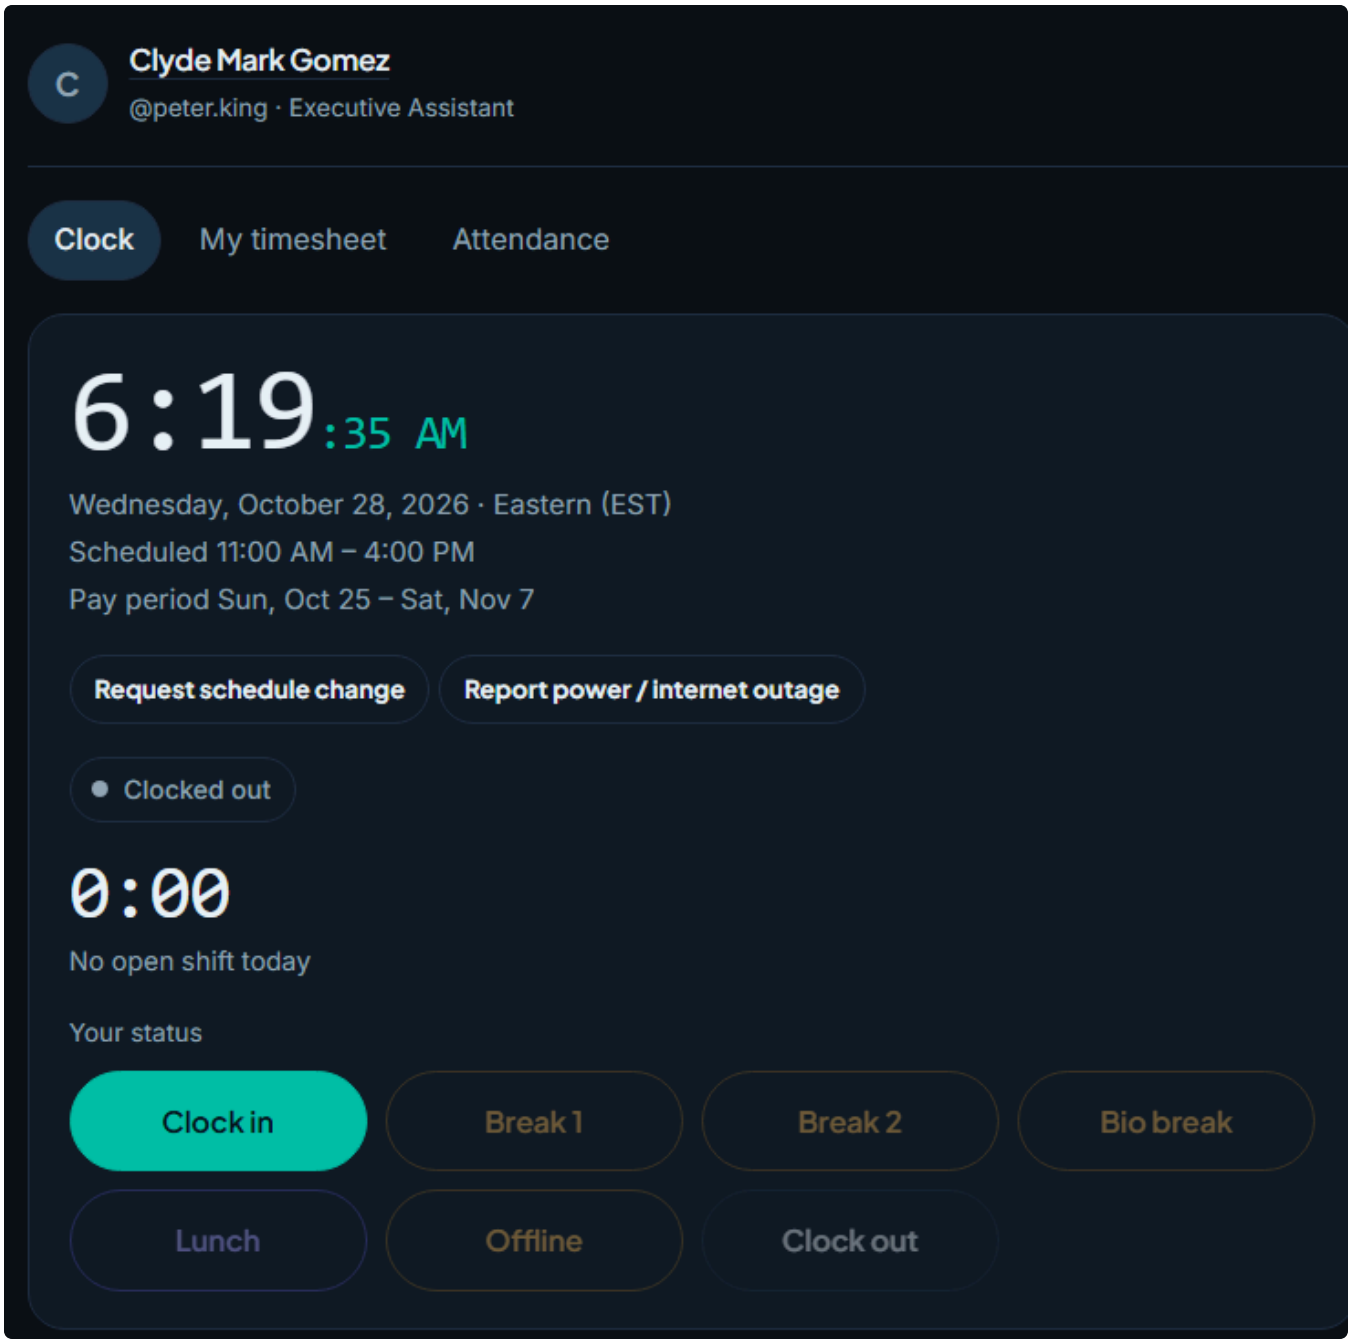

Step 2: Clock in on the Clock tab

After you sign in, the **Clock** tab opens. Here is what you see, from top to bottom:

- **Your name and tabs.** Employees get three tabs: **Clock**, **My timesheet** and **Attendance**. **Sign out** is on the right.
- **Time and shift.** The live time, today's date, your shift (for example "Scheduled 11:00 AM – 4:00 PM") and the current pay period.
- **Your status.** It says "Clocked out" until you start. A timer below it counts your open shift.

To start work, press **Clock in** under **Your status**. The other buttons are for the rest of the day:

- **Break 1**, **Break 2**, **Bio break** and **Lunch**: press the one that matches when you step away.
- **Clock out**: press it when your shift is done.
- **Request schedule change**: press it if your shift needs to change.

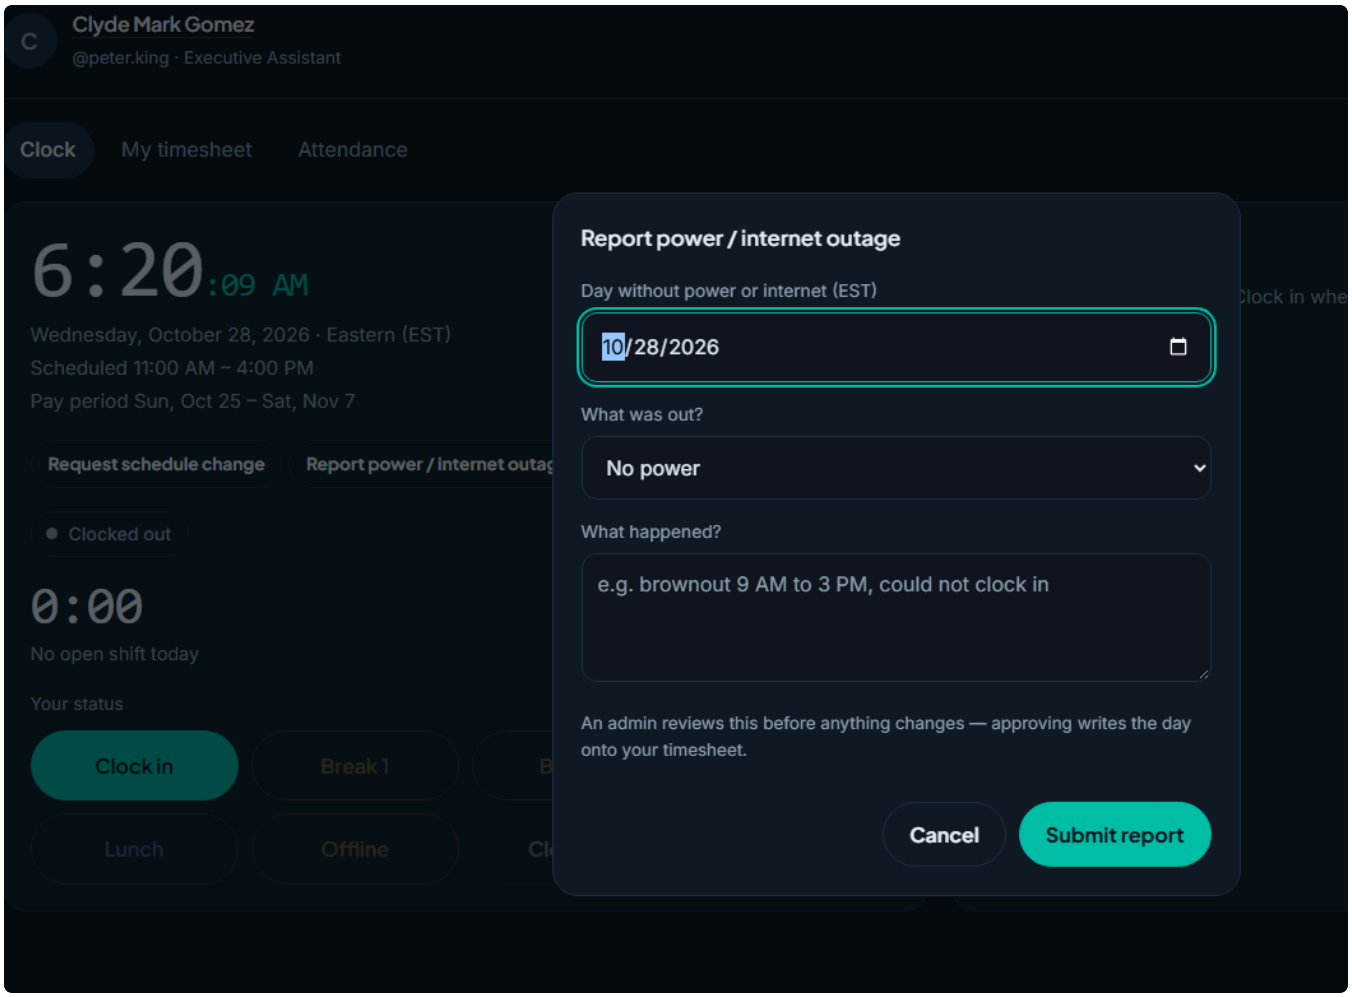

Step 3: Report a power or internet outage

If you lose power or internet and can't clock in or out, report it. Press **Report power / internet outage** and fill in the form:

1. Pick the **day** it happened (EST).
2. Choose **what was out** from the list.
3. Write **what happened**, for example "brownout 9 AM to 3 PM, could not clock in".
4. Press **Submit report**.

An admin reviews your report first. Nothing changes until they approve it, and approving it adds that day to your timesheet.

Step 4: Check your hours on My timesheet

Open **My timesheet** to see each day's status, clock-in and clock-out times, and break times. It opens on the current week. Use **From** and **To** to pick other dates, and **This week** to come back.

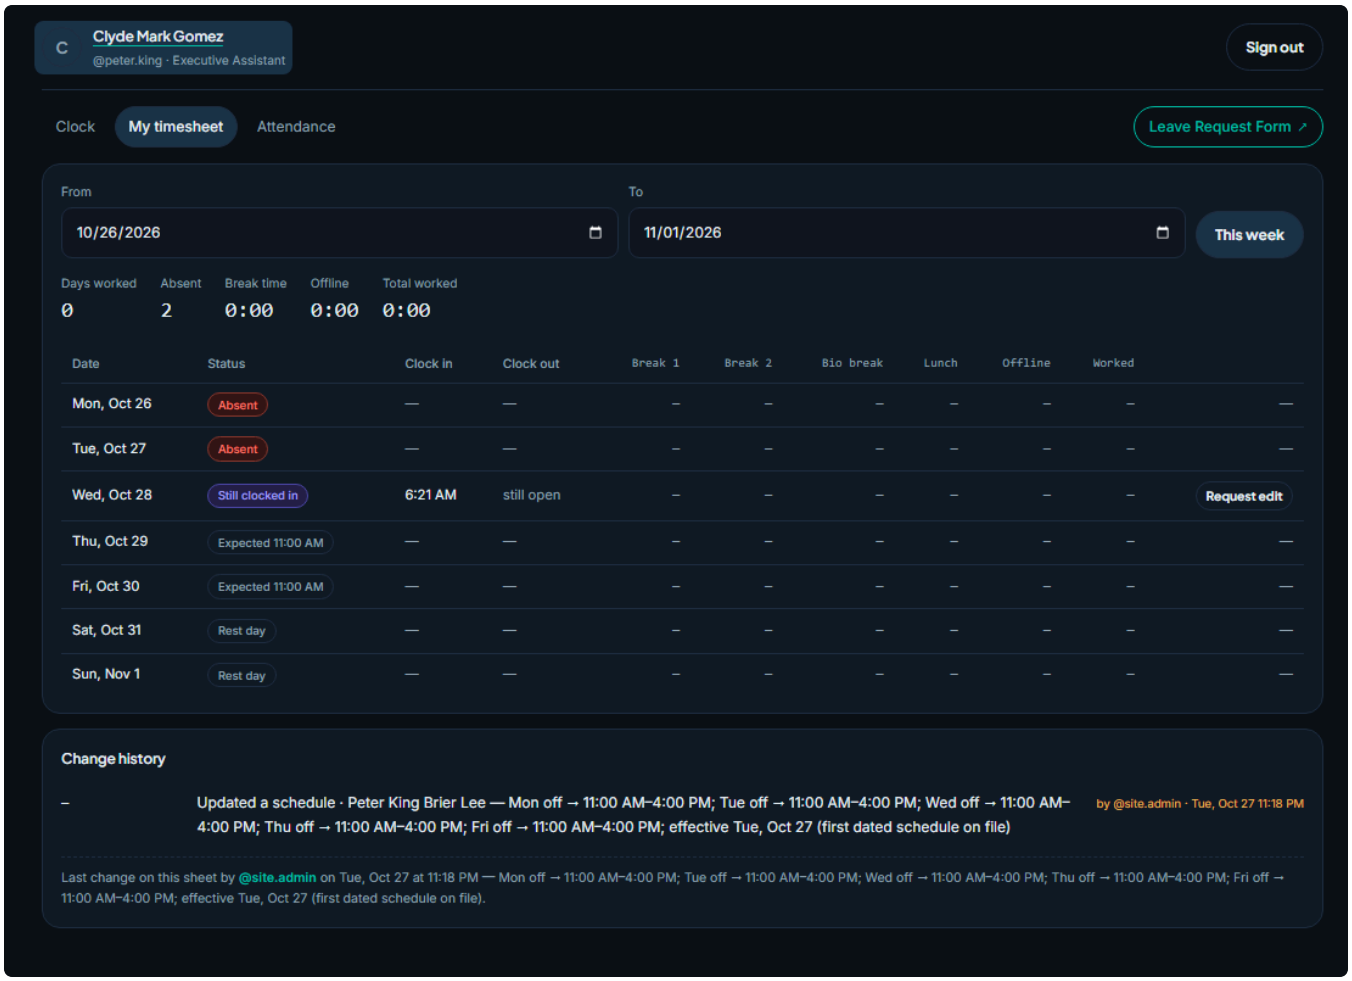

- The totals at the top show days worked, absences, break time and total worked.
- Statuses include Absent, Still clocked in, Expected (your start time) and Rest day.
- If a row needs fixing, press **Request edit** on that row.

- **Change history** at the bottom shows who changed your schedule and when.

When to request an edit: press **Request edit** on a day's row when the record doesn't match what you worked, for example:

- You forgot to clock in or clock out, so the row still says "Still clocked in" or shows no time.
- A clock-in, clock-out or break time is wrong.

Do it as soon as you spot the mistake, before the pay period closes. If the problem was a power or internet outage, use **Report power / internet outage** instead (Step 3).

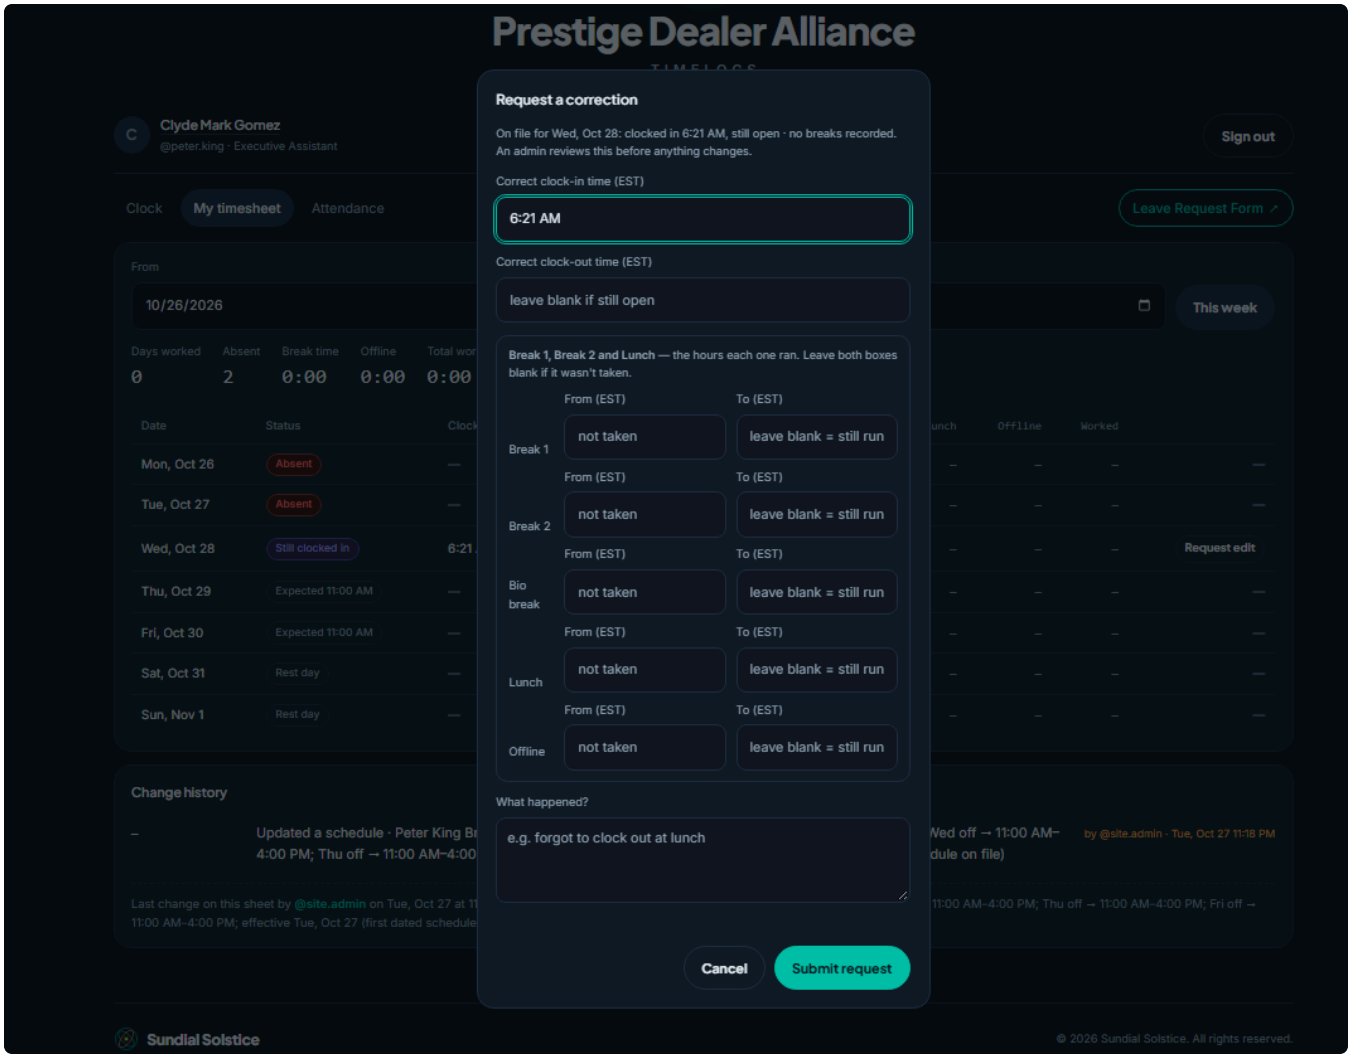

Step 5: Request a correction

Press **Request edit** on the day's row. A form called **Request a correction** opens. At the top it shows what is on file for that day, for example "clocked in 6:21 AM, still open · no breaks recorded". Fill in only what needs fixing. All times are Eastern (EST).

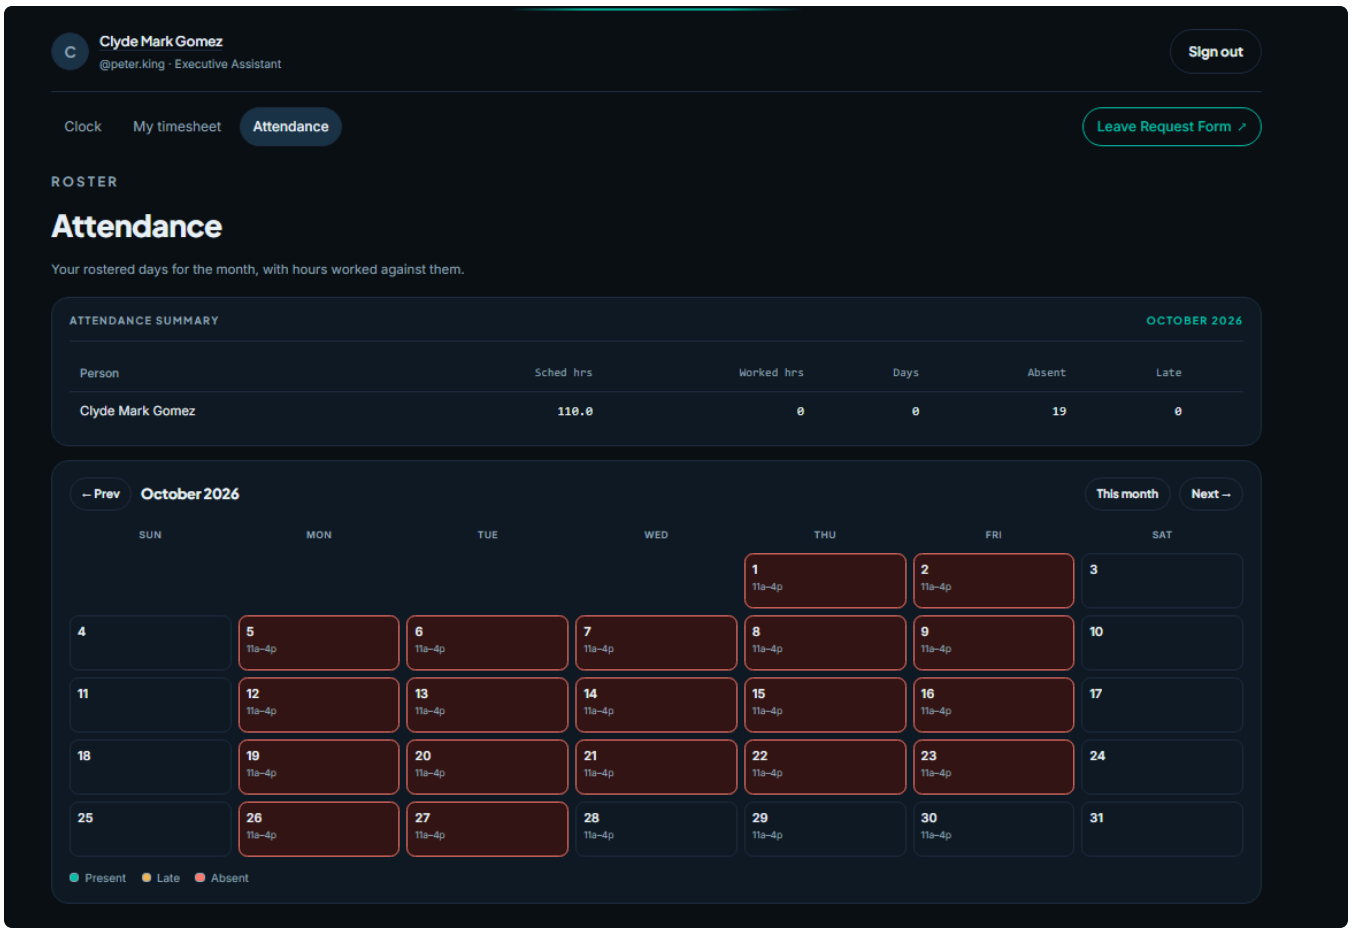

1. **Correct clock-in time:** the time you actually started.
2. **Correct clock-out time:** the time you finished. Leave it blank if the shift is still open.

3. **Breaks:** for Break 1, Break 2, Bio break, Lunch and Offline, enter a **From** and **To** time. Leave both boxes blank if you didn't take that break, or leave **To** blank if it is still running.
4. **What happened:** a short reason, for example "forgot to clock out at lunch".
5. Press **Submit request**. An admin reviews it before anything changes. Press **Cancel** to close the form without sending.

Step 6: Check your month on Attendance

Open **Attendance** to see your scheduled days for the month and the hours you worked against them. The summary shows scheduled hours, worked hours, days, absences and late arrivals. In the calendar, each day is marked **Present** (green), **Late** (amber) or **Absent** (red) and shows its scheduled hours, such as 11a–4p. Use **Prev**, **This month** and **Next** to change month.

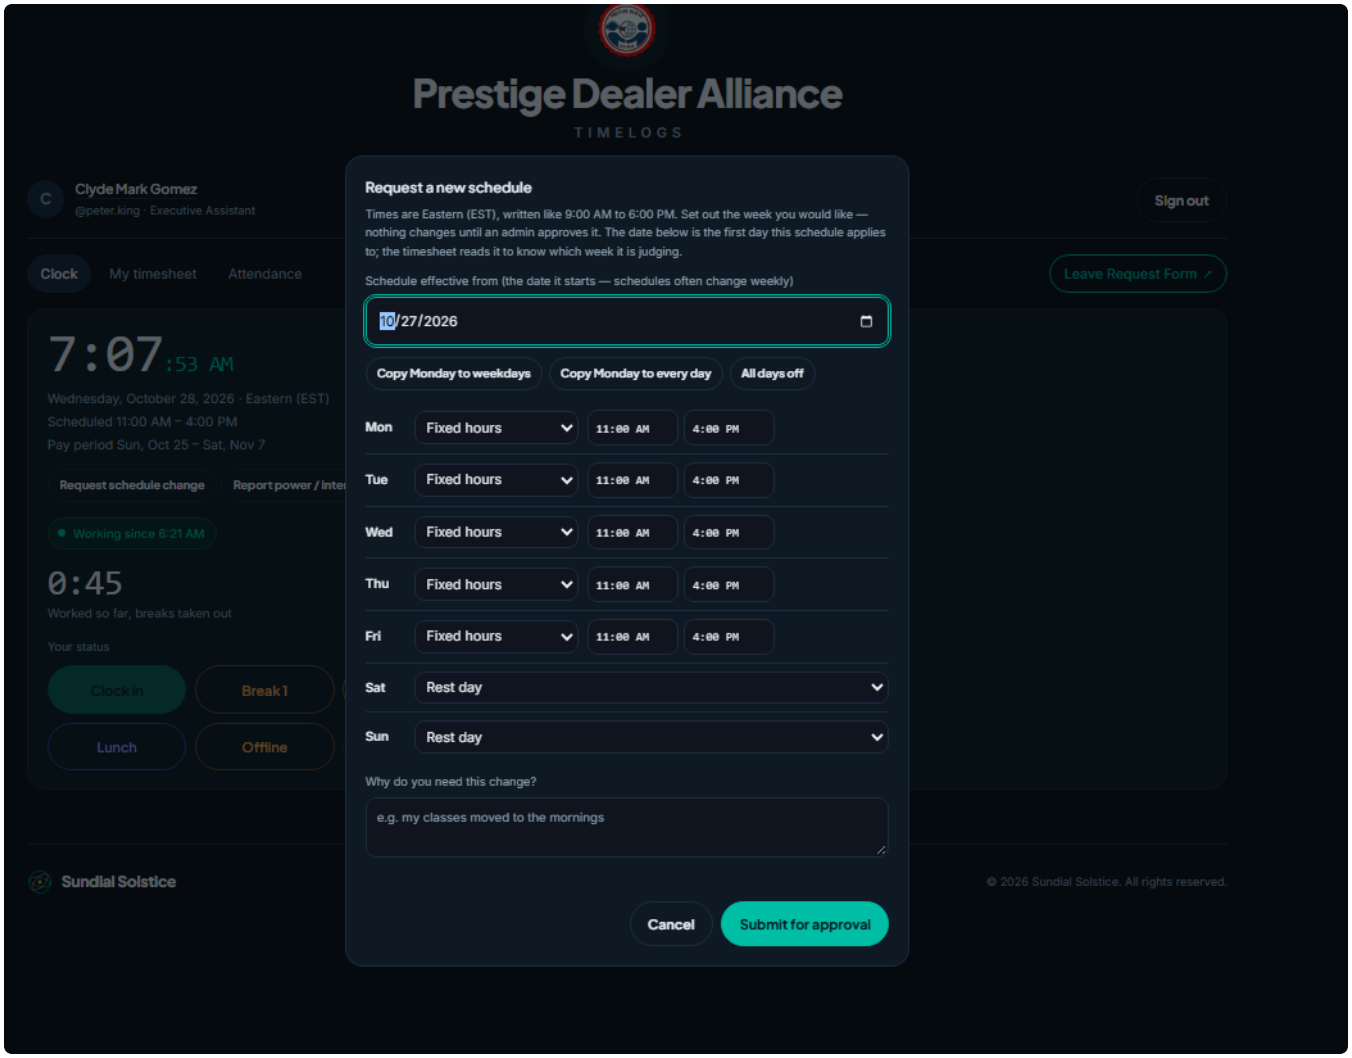

Step 7: Request a new schedule

Press **Request schedule change** on the **Clock** tab. It sits above your status, next to **Report power / internet outage**. The **Request a new schedule** form opens. Times are Eastern (EST), written like 9:00 AM to 6:00 PM. Nothing changes until an admin approves it.

1. **Effective from:** pick the date your new schedule starts. It is the first day the schedule applies, and schedules often change weekly.
2. **Set each day, Mon to Sun:** choose **Fixed hours** and enter a start and end time, or choose **Rest day**.
3. **Save time:** use **Copy Monday to weekdays**, **Copy Monday to every day** or **All days off**.
4. **Why do you need this change?** Add a short reason, for example "my classes moved to the mornings".
5. Press **Submit for approval**. Press **Cancel** to close the form without sending.

Schedule updates made by an admin show in **Change history** at the bottom of **My timesheet**.

Step 8: Request time off

Press **Leave Request Form** at the top right of the **My timesheet** or **Attendance** tab and fill in the form.

What you use it for

Area	Purpose
Schedules	See when you are expected to work
Timesheets (Sundial Timelogs)	Clock in and out and record your hours
Leave	Request and track time off
Payroll	Hours feed straight into the payroll run

Daily routine

- **Start of shift:** open the **Clock** tab, check your status reads "Clocked out" and your scheduled hours are correct, then select **Clock in**.
- **Breaks:** select **Break 1**, **Break 2** or **Bio break** when you step away, and **Lunch** for your meal break. Update your status again when you're back.
- **If you go offline:** if you lose power or internet and can't clock in, clock out or stay clocked in, report it with **Report power / internet outage** so an admin can review it and correct your timesheet.
- **End of shift:** select **Clock out**, then open **My timesheet** and check today's row (clock-in, clock-out and break times). A row marked "Still clocked in" means you haven't clocked out yet. If a time is wrong, use **Request edit**.
- **Weekly check:** on **My timesheet**, review Days worked, Absent and Total worked for the week. On **Attendance**, check the month's days are marked Present, Late or Absent as you expect.
- **Schedule:** your shift shows on the Clock screen. If it needs to change, select **Request schedule change**. "No schedule on file" means none is set for you, so ask your manager.
- **Time off:** use the **Leave Request Form** button rather than a message or paper.
- **End of period:** confirm your timesheet is accurate before the pay period closes, since payroll is calculated from it.

Good habits

- Never share your passcode. Your clock-ins are tied to your login.
- Fix errors early, before the period closes.

- Sign out on shared devices.

Need help?

- Can't sign in or no account yet: contact your admin.
- Wrong hours or missing leave: raise it with your manager or admin before payroll is run.

Note: the Clock, My timesheet and Attendance tabs the outage report, the Request edit form and the schedule request form are covered from screenshots. The Leave Request Form, payslips and what the Offline button does weren't visible, so confirm those steps against the live app before distributing.
